

Preregistration

Experiment 3a:

Does your upbringing affect your moral responsibility as an adult?

Follow-up study

1 Description

In this quick follow-up, we run a replication of Faraci and Shoemaker’s 2014 paper, “Huck vs. Jojo: Moral ignorance and the (a)symmetry of praise and blame.”

2 Data Collection

- ☐ Yes, we already collected the data.
- ☒ No, no data have been collected for this study yet.
- ☐ It’s complicated. We have already collected some data but explain in Question 8 why readers may consider this a valid pre-registration nevertheless.

3 Hypothesis

For both pairs of cases (two blame and two praise), we predict a significant difference.

We predict that the ignorant agent is considered less blameworthy than their non-ignorant counterpart.

We predict that the ignorant agent is considered more praiseworthy than their non-ignorant counterpart.

4 Dependent Variables

DV1 (Blame)

“On the scale below, please choose the number that best represents the degree to which you think Tom is morally blameworthy (if at all) for spitting on the black man.”

Scale and labels:

- 1 = not at all blameworthy
- 4 = somewhat blameworthy
- 7 = completely blameworthy

DV2 (Praise)

“On the scale below, please choose the number that best represents the degree to which you think Tom is morally praiseworthy (if at all) for helping the man up.”

Scale and labels:

- 1 = not at all praiseworthy
- 4 = somewhat praiseworthy
- 7 = completely praiseworthy

DV3 (True Self)

“On the scale below, please circle the number that best represents the extent to which you agree that what Tom did expressed his true self—the person he really is deep down inside.”

Scale and labels:

- 1 = disagree completely
- 4 = neither agree nor disagree
- 7 = agree completely

5 Conditions

This is a 2×2 between-subjects design with the independent variables Ignorance (Ignorant, Non-Ignorant) and Moral Valence of the Action (Blameworthy, Praiseworthy). As stimuli, we used the materials shared by Faraci and Shoemaker.

Non-Ignorant, Blameworthy

“Tom is a white male who was raised in New Orleans. Growing up, he was taught to respect all people equally. Nevertheless, as an adult, he decided to become a proud racist, someone who believes that all non-white people are inferior and that he has a moral obligation to humiliate them when he gets a chance. At the age of 25, Tom moves to another town. Walking outside his home, he sees a black man who has tripped and fallen. In keeping with his moral beliefs, Tom spits on the man as he passes by.”

Ignorant, Blameworthy

“Tom is a white male who was raised in New Orleans. Growing up, he was taught to respect all people equally. Nevertheless, as an adult, he decided to become a proud racist, someone who believes that all non-white people are inferior and that he has a moral obligation to humiliate them when he gets a chance. At the age of 25, Tom moves to another town. Walking outside his home, he sees a black man who has tripped and fallen. In keeping with his moral beliefs, Tom spits on the man as he passes by.”

Non-Ignorant, Praiseworthy

“Tom is a white male who was raised in New Orleans. Growing up, he was taught to respect all people equally. Nevertheless, as an adult, he decided to become a proud racist, someone who believes that all non-white people are inferior and that he has a moral obligation to humiliate them when he gets a chance. At the age of 25, Tom moves to another town. Walking outside his home, he sees a black man trip and fall. Usually, Tom would spit on the man. But this time, Tom goes against his current moral beliefs, and helps the man up instead.”

Ignorant, Praiseworthy

“Tom is a white male who was raised on an isolated island in the bayous of Louisiana. Growing up, he was taught to believe that all non-white people are inferior and that he has a moral obligation to humiliate them when he gets a chance. As an adult, he decided to become a proud racist, embracing what he was taught. At the age of 25, Tom moves to another town. Walking outside his home, he sees a black man trip and fall. Usually, Tom would spit on the man. But this time, Tom goes against his current moral beliefs, and helps the man up instead.”

6 Analyses

Just as Faraci and Shoemaker (2014), we conduct two t-tests, comparing the two blame and the two praise conditions with one another.

7 Outliers and Exclusions

Just as in Experiments 1 and 2, we use Prolific’s screeners and only allow participation if the following conditions are met:

- First Language: English
- Country of Residence: US

We use a screener to exclude participants from other studies related to this project.

8 Sample Size

An *a priori* power analysis was conducted to determine the required sample size for each of the two two-tailed independent samples t-test. Based on Faraci and Shoemaker’s earlier work, a large effect size (d at least 0.80) was assumed. With an alpha level of $\alpha = 0.01$ and a planned sample size of $N = 280$ ($n = 70$ per group), the achieved statistical power ($1 - \beta$) is approximately 0.935 (93.5%). This sample size ensures that the study is sufficiently powered to detect the hypothesized effect while maintaining a strict control for Type I errors.

9 Other

Praise Explanation

“In this study, we are particularly interested in why people like you consider others blame- or praiseworthy. Please explain in as many words as you like why you considered Tom praiseworthy to the degree you chose.”

Blame Explanation

“In this study, we are particularly interested in why people like you consider others blame- or praiseworthy. Please explain in as many words as you like why you considered Tom blameworthy to the degree you chose.”

10 Type of Project

- ☐ Class project or assignment
- ☒ Experiment
- ☐ Survey
- ☐ Observational/archival study
- ☐ Other (describe below)
